

ADS Data Visualization Assignment 6.

Using Plotly express as px, source the data using the command `px.data.gapminder()` and save it into a dataframe. Based on the data, map the following information with the appropriate geographical plot. Map out:

1. The mean life expectancy of all the Asian countries according to the data.
2. Deviation in GDP of each country in Europe and South America.
3. The change in population of each African country in the last 3 decades.
